

INTRODUCING!

EnviroAqua is pleased to announce its newest Cooling Tower application. Read more about BXD Solid Water Treatment.

BXD Blended Solid Concentrate

BXD Blended Solid Concentrate is a quick and easy way to treat small cooling towers. EnviroAqua's proven concentrated chemistry is introduced to the system with our patented product, BXD Blended Solid Concentrate. The BXD Blended Solid Concentrate is magnetically attached below the water level in the sump of a cooling tower (hangers are available for non-magnetic surfaces). After attaching to the cooling tower, the BXD Blended Solid Concentrate releases chemistry through lid venting. The fixed release of chemistry allows treatment to continue long after the box has been applied.

BXD Blended Solid Concentrate:

*ELIMINATES EQUIPMENT COST

*SHORTENS SERVICE TIME

*ELIMINATES LIQUID CHEMICAL RISK (No More Hand Pouring Chemical)

*REDUCES NUMBER OF SITE VISITS

*NO MEASURING SYSTEM DOSAGE, EASY APPLICATION

*ENVIRONMENTALLY FRIENDLY

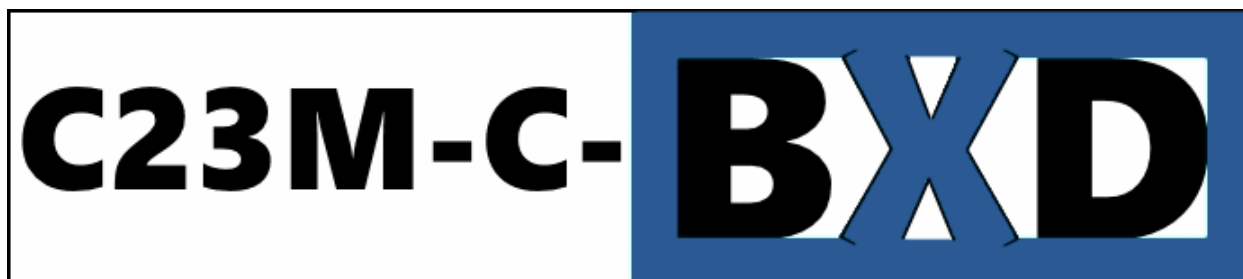

EnviroAqua is currently introducing BXD "Stand Alone" treatment which includes a corrosion inhibitor, scale inhibitor, and a general dispersant. See below for more details on our latest product offering.

BXD Stand Alone Treatment

C23M-C-BXD

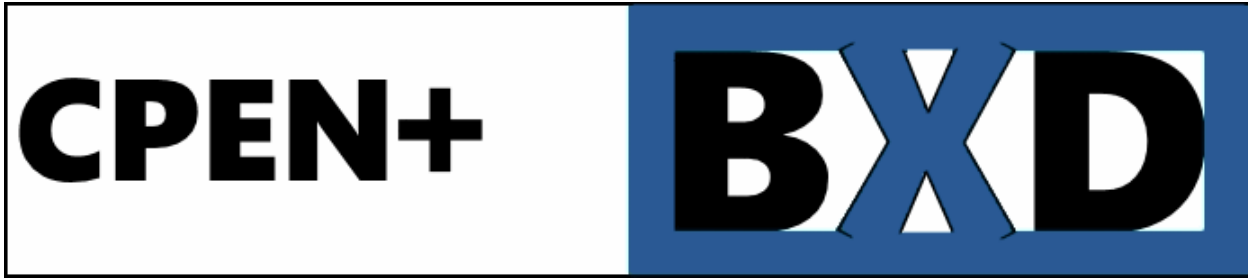

Blended solid concentrate C23M-BXD is a water treatment corrosion/scale inhibitor.

Function: C23M-BXD is a proprietary water treatment for corrosive conditions that utilizes the very latest corrosion inhibitors, anti-scaling and anti-fouling technology.

This product's approach to inhibit ferrous metal corrosion utilizes both cathodic and anodic protection, as well as copper corrosion inhibitors. Contains PBTC and HEDP Phosphonates, Versaflex One, Ter-polymer, HPA, POCA, Azole, and Molybdate tracer.

Packaging: There are 12 individually wrapped BXD's per case. One (1) C23M-BXD weighs 1.5 lbs.

CPEN+ BXD

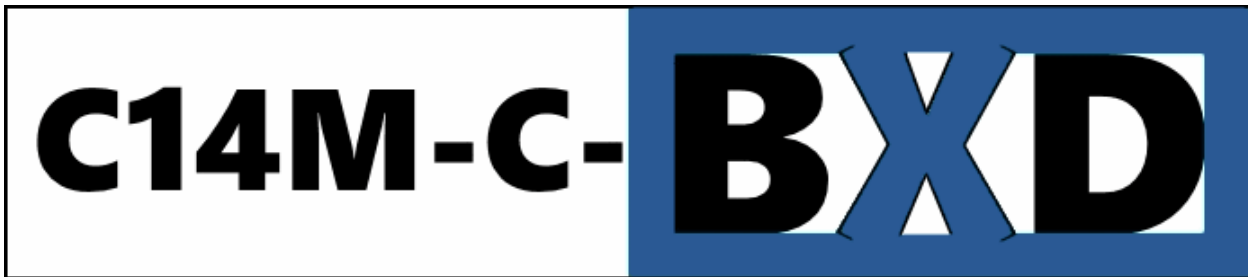

Blended solid concentrate CPEN+BXD is a cooling system general dispersant which assists in the prevention and removal of foulants.

Function: CPEN+BXD was designed to supplement cooling system inhibitors and biocides in order to maintain clean surfaces in heat transfer equipment and cooling towers.

It also functions as a general corrosion inhibitor and cleaner for heavily fouled systems. Use in conjunction with biocides to assist in maintaining a clean system.

Packaging: There are 12 individually wrapped BXD's per case. One (1) CPEN+ BXD weighs 1.2 lbs. Follow Safety Data Sheet (SDS) regarding proper storage and handling.

C14M-C-BXD

Blended solid concentrate C14M-BXD is a water treatment scale/corrosion inhibitor.

Function: C14M-BXD is a proprietary water treatment for scaling tendency water, utilizing the very latest anti-scaling, anti-fouling, and corrosion inhibition technology.

This product contains PBTC and HEDP Phosphonates, Versaflex One, Ter-polymer, PMA, Azole, and Molybdate tracer.

Packaging: There are 12 individually wrapped BXD's per case. One (1) C14M-BXD weighs
1.5 lbs.
